

HEZID VEiN

HEZID VEiN is a module for vein recognition. This technology provides an extremely high level of identification reliability, does not require direct contact and is not affected by contamination and weather conditions.

With an extremely low false acceptance and reject rate, it provides the highest reliability of all hand or finger based biometric authentication methods.

HEZID VEiN is the suitable for use in organizations which require an extremely high level of security:

- **Police and military sites;**
- **Banks,** safety vaults, casinos;
- **Hospitals,** research centres;
- **Server rooms,** archive storage rooms;
- **Corporate needs,** sites of strategic importance.
